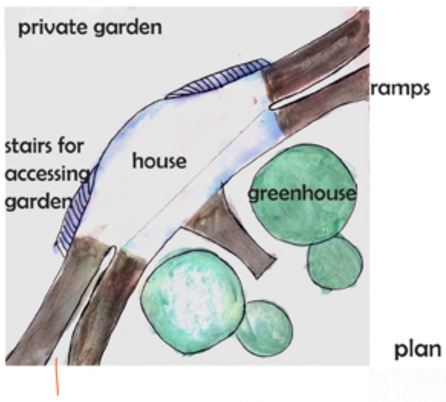
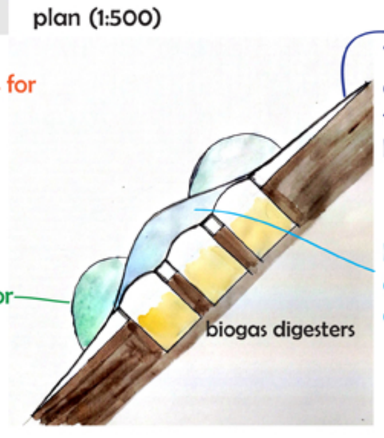
Design Process

5. second pin-up



plan (1:500)

2 holes in both sides of the ramps for making nature ventilation



The ramps in both sides are used for accessing the house and also for lead the ventilation

In the house we have 3 domes of the digesters as decoration.

we use geodesic dome tecnique for making greenhouse

section(1:500)

We want to hide the digesters from outside as well as combine the digesters with the design of our residential house.
So mainly we have two tasks:
1. We should cover the biogas digesters
2.When we combine the digesters with the house, we should make sure the bad smell wouldn't go into the house
